

Pendant with Stand Installation

Read these instructions fully before beginning installation.

1. Install your granite base on a level surface. Dirt, gravel, or concrete footing is fine so long as there is proper drainage.
2. The iron bars should be glued into place. Ensure there is no wiggle!

*If there is any wiggle in your iron bars,
Use 5-minute Epoxy by Loctite*

3. With help, lift your pendant/disc into place and use the provided shims to hold your pendant upright. Four (4) shims are provided, you can use two on each side or one and one, depending on the thickness of your disc.

Use a level so your disc is fully upright!

4. The provided barrel bolts should be installed with washers on each side on the outside of the iron prongs as shown below.
Double-check your bolts for safety and position of your disc, and enjoy!
